Self-Testing Instructions
COVID-19 Ag Rapid Test Cassette (Swab)
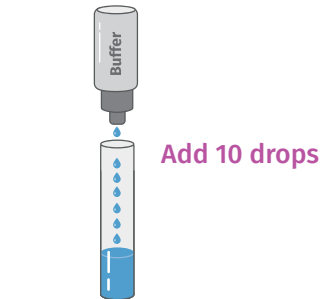

C19 TESTING

Introduction

Instructions for taking a rapid antigen test for coronavirus using the Healgen / Orient Gene COVID-19 Ag Rapid Test Cassette.

A complimentary video can be found here: https://youtu.be/xpipL2LJ9Yw

A positive result indicates infection with coronavirus and you should isolate immediately and take an rtPCR test to confirm the result.

All materials can be disposed of in household waste.

Add 10 drops

1 Add 10 drops of extraction buffer to an extraction tube.

Open the foil packet of a test cassette.

SPECIMEN COLLECTION - Use the swab supplied in the kit.
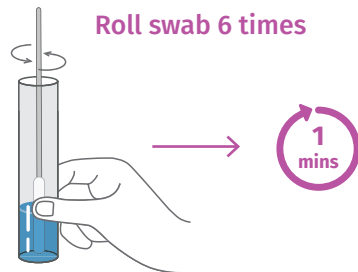

2 Insert the tip of the swab into one nostril for 2-3cm until resistance is felt.
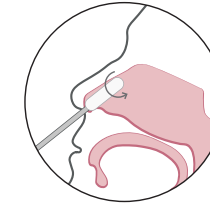

**3** Roll the swab **5 times** against the inside of the nose.
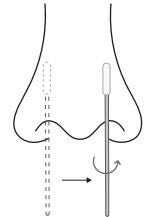

4 Repeat the swabbing process in the other nostril.

Roll swab 6 times

1 mins

**5** Insert the swab into the extraction tube which contains the extraction buffer.

Roll the swab at least 6 times while pressing the head against the bottom and side of the extraction tube.

Leave the swab in the extraction tube for 1 minute.

6 Withdraw the swab from the tube while squeezing from the outside to squeeze out all the fluid from the swab tip.

Place a lid firmly on the extraction tube.
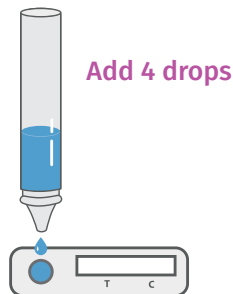

Add 4 drops

7 Add 4 drops of sample solution into the sample well of a test cassette.

15 mins

8 Wait for the colored band(s) to appear.

The result should **only be read after 15 minutes.**

Do not interpret the result after 20 minutes.

Positive   Negative   Invalid

9 If you do not see a "C" line then the test is invalid and **must be repeated.**

A "C" line on its own indicates a negative test.

A "C" and a "T" line **(even if very faint)** indicates a positive test and you should isolate.
